

Prof. Dr. Ewa Rembiałkowska

Professor, Head of Department of Functional and Organic Food and Commodities

Organic food production and diets for a green Europe

Research emphasis:

Evaluation of the bio-compounds content in organic vs. conventionally produced plant crops and their preserves; Different aspects of organic and conventional food consumers' lifestyle; Impact of the organic foodstuffs on animal and human health.

Prof. Dr. Franc Bavec

Professor of Field Crops and Organic Agriculture, national representative to the European Society for Agronomy

Importance of functional biodiversity on the fields and how to support it

Research emphasis:

Sustainable agricultural system, organic farming, production, utilization of alternative crops.

Dr. Paola Migliorini

Assistant Professor, University coordinator of LLP ERASMUS Programme, Scientific coordinator of the UNISG Ecological Garden project

Agrobiocultural diversity in organic farming: results from different studies in Italy

Research emphasis:

Agricultural model, agro-ecosystem studies and agroecological approach: Ecological, Sustainable and Organic agriculture; sustainability evaluation with agroecological indicators: soil fertility, biodiversity, energy efficiencies; Organic production systems and effect on the products.

Dr. Sabine Zikeli

Coordinator for Organic Farming and Consumer Protection, Member of the Association for the Support of Traditional Crops, German Union of Soil Scientists and the International Society of Organic Farming Research

Organic Farming – A Benefit For Biodiversity in Agroecosystems

Research emphasis:

Soil Science and Plant Nutrition at the interface to crop production and on the management of natural resources, especially in cropping system research, carbon dynamics and nutrient flows on farm level.
